Setup and configuration software

The scope of supply includes a software for easy sensor configuration. The settings can be implemented conveniently via a Windows user interface on the PC. The sensor parameters are sent to the sensor via the serial port and can also be saved if required. The software is available as single and multi-channel version. The sensor is connected to the PC via the sensor cable using a USB converter.
[for any ILD sensor]

Free download

Download free of charge from www.micro-epsilon.com/download: software, driver and well-documented driver DLL for easy sensor integration in existing or customer software.

Protection housing for harsh environment

To protect the laser sensors in extreme environments, individual protective housings are available for all sensor models. There are three different models:

SGH model:

Completely enclosed housing with an integrated front window, where the sensor measures through the window. The water-resistant housing provides protection against solvents and detergents.

SGHF model:

With window and compressed-air connection ideal for high ambient temperatures. The integrated air cooling of the housing offers optimum protection for the sensor.

SGHF-HT model:

This water-cooled protection housing with window and compressed-air connection is designed for measurement tasks in ambient temperatures up to 200°C.
Suitable for all long-range sensors
optoNCDT 1710
optoNCDT 1700-500 and optoNCDT 1700-750
optoNCDT 2310
optoNCDT 2300-200
Maximum ambient temperature 200°C
Maximum cooling water temperature $T(max) = 10°C$
Minimum water flow rate $Q(min) = 3$ liters/min

SGx ILD size S (140x140x71mm)
for optoNCDT 1700 / 2300 dimensions 97x75mm

SGx ILD size M (140x180x71mm)
for optoNCDT 1700 / 2300 dimensions 150x80mm

IF2008 - PCI interface card

The IF2008 interface card is designed for installation in PCs and enables the synchronous capture of four digital sensor signals and two encoders. The IF2008E expansion board enables the acquisition of two digital sensor signals, two analog sensor signals and eight I/O signals. The absolutely synchronous data acquisition plays an important role particularly for planarity or thickness measurement tasks. The data are stored in a FIFO memory in order to enable resource-saving processing in the PC in blocks.

Features
- 4x digital signals and 2x encoders with IF2008 basic PCB
- 2x digital signals, 2x analog signals and 8x I/O signals with IF2008E expansion board
- Additional expansion board for a total of 6x digital signals, 2x encoders, 2x analog signals and 8x I/O signals
- FIFO data memory
- Synchronous data acquisition
Interface card IF2008, IF2008E
for individual signal processing

IF2001/USB converter RS422 to USB

The RS422/USB converter transforms digital signals from a laser-optical sensor into a USB data packet. The sensor and the converter are connected via the RS422 interface of the converter. Data output is done via USB interface. The converter loops through further signals and features such as laser on/off, switch signals and function output. The connected sensors and the converter can be programmed through software.

IF2004/USB: 4-channel converter from RS422 to USB

The RS422/USB converter is used for transforming digital signals from up to four optical sensors into USB data signals. The converter has four trigger inputs and a trigger output for connecting additional converters. Data is output via an USB interface. The connected sensors and the converter can be programmed through software.

Features
- 4x digital signals via RS422
- 4x trigger inputs, 1x trigger output
- Synchronous data acquisition
- Data output via USB

C-Box controller for conversion and evaluation of up to two sensor signals

C-Box/2A is used for fast D/A conversion of two digital input signals or for evaluating two digital sensor signals. The controller is compatible with the optoNCDT 2300 laser triangulation sensors. Output of the sensor signals is possible via two configurable analog outputs, Ethernet or USB. Handling of the C-Box/2A and of the connected sensors are performed via web interface. Averaging functions, thickness, diameter, step and inclinations can be calculated. The D/A conversion is executed at 16 Bit and max. 70kHz.

CSP2008 - Universal controller for up to six sensor signals

The controller CSP2008 has been designed to process two to six both optical and other sensors from Micro-Epsilon (6x digital or 4x analog input signals max., 2x internal + 4x external via Beckhoff EtherCAT modules. EtherCAT is intended as external bus for connecting further sensors and I/O modules. The controller is equipped with a display offering multi-color backlighting which changes its color in the case of exceeding the limit value while a signal is displayed.

Beckhoff modules for extended inputs / outputs
EK1100, EtherCat bus coupler
EL4102, analog output terminal, 0 ... +10V, 2 channels (16bit), EtherCAT
EL4132, analog output terminal, -10... +10V, 2 channels (16bit), EtherCAT
EL4024, analog output terminal, 4 ... 20mA, 4 channels (12bit), EtherCAT
EL2002, digital output terminal, 24 VDC/ 0,5 A, 2 channels, EtherCAT
EL2004, digital output terminal, 24 VDC/ 0,5 A, 4 channels, EtherCAT
EL3142, analog input terminal, 0 ... 20mA, 2 channels (16bit), EtherCAT
EL3162, analog input terminal, 0 ... 10V, 2 channels (16bit), EtherCAT
EL1002, digital input terminal, 24 VDC/3 ms, 2 channels, EtherCAT
EL1012, digital input terminal, 24 VDC/10 μs, 2 channels, EtherCAT
EL1014, digital input terminal, 24 VDC/10 μs, 4 channels, EtherCAT
EL1104, digital input terminal, 24 VDC/3 ms, 4 channels, EtherCAT
EL5101, incremental encoder interface, RS485 differential inputs, EtherCAT
EK1122, 2-Port EtherCAT junction
RS422 extension terminal

Features

- Real-time capability up to 100kHz (processing and output of measured values with 100kHz)
- Unique user interface (web browser) for the configuration of the controller via Ethernet on a PC. The user interface does not require any program installation. Display and storage of measured values on the PC via web browser.
- Simple sensor connection with automatic sensor recognition, configuration of the sensor using buttons and display on universal controller or via web browser
- Modular system upgradable with additional I/O modules for customer-specific requirements. Internal communication between I/O components via EtherCAT connection (CSP 2008 acts as master).
- Extremely flexible; function modules are freely combinable
- Simple mounting using mounting rail TS 35

Universal controller with mounting rail TS 35
(dimensions in mm, not to scale)
